this book represents a systematic review of the documented impacts of programs aimed at fostering socio emotional skills in developed and developing countries it uses a life cycle approach to organize the findings from rigorous evaluations of more than 80 programs this includes programs for toddlers and young children before primary school programs for students enrolled in formal education and programs targeted at the out of school population the book develops a conceptual framework that helps to identify the program characteristics and participants profiles associated with a range of program outcomes these include health related behavioral academic or cognitive and economic related outcomes the review finds that few of the programs studied focus exclusively on the development of socio emotional skills in fact most efforts to develop socio emotional skills are embedded within innovative education and training curricula as well as pedagogical and classroom practices evidence shows that programs are particularly effective when targeted to highly vulnerable populations and in particular to young children overall findings indicate that high

quality programs for young children tend to foster cognitive abilities in the short run and to impact socio emotional skills over the long run programs for students enrolled in formal education primary and secondary levels show positive and significant impacts on the outcomes reviewed the most successful of these programs are implemented school wide and follow the safe approach that is they are appropriately sequenced active focused and explicit finally the review finds that programs for out of school children and youth are usually designed as a means of achieving immediate labor market outcomes e g job placement formal employment and higher wages while some of these programs show positive and statistically significant impacts on socio emotional skills the impacts tend to be small

lateral preferences are strange puzzling and on the surface not particularly adaptive aspects of behavior why one chooses habitually to write or to brush the teeth with the right hand while a friend or family member habitually uses the left hand might be interesting enough to elicit some conversation over dinner or a drink but certainly does not seem to warrant serious scientific study yet when one looks at human behaviors more carefully one becomes aware that asymmetrical behaviors favoring one side or the other are actually a fairly universal characteristic of human beings in the same way that we are right or left handed we are also right or left footed eyed and eared as a species we are quite lopsided in our behavioral coordinations furthermore the vast majority of us are right sided considering that we are looking at a sizable number of behaviors and at a set of biases that seem to be systematic and show a predictable skew in the population the problem takes on greater significance the most obvious form of lateral preference is of course handedness when studying behavioral asymmetries this is the issue with which most investigators start actually we entered this research area through a much different route around 1971 we became interested in

the problem of eye dominance or eye preference this is a behavior where the input to one eye seems to be preferred over that to the other in certain binocular viewing situations

Were there unforeseen ripple effects that significantly altered the course of events? To address this, consider constructing a timeline of events, highlighting the cascading consequences of Jason Kass's decisions. For instance, [explain a chain of events triggered by one of Jason Kass's actions and the eventual outcomes]. This type of analysis allows for a comprehensive evaluation of his lasting legacy.
